

CREATION MOMENTS

Proclaiming Evidence for Truth

THIS WEEK'S CREATION MOMENT

God's Mind Is Bigger than Ours

Which maketh Arcturus, Orion, and Pleiades, and the chambers of the south. Which doeth great things past finding out; yea, and wonders without number. (Job 9:9-10)

The entire universe and all its forces were planned and created out of the mind of God. Since He is God, He was not forced to make anything in a certain way. The study of the universe and its forces is called cosmology. The night sky is a breathtaking vision to anyone who views it far away from city lights. As cosmologists look into space, they see mysteries that cannot be explained. One would think that the cosmologist would be more likely than most to recognize the genius of God.

Researchers recently gave a supercomputer the task of calculating the results of gravitational collapse of a huge collection of matter in space. The result was what scientists call an "infinity". This means that the answer to the mathematical problem is so complex that no scientist can calculate it. Even the most powerful computer in the world is not up to the task! The team that arrived at the incomprehensible answer admits that modern science really knows very little about the nature of the cosmos.

Cosmologists know that the universe is not an accident. They expect the universe to have laws and make sense. As they learn more about the universe, they are gaining an even greater appreciation for the Mind from which the universe has come. The study of cosmology has led even some of the most-hardened atheists to admit that sometimes the idea of a Creator God does not seem so far-fetched.
