

CREATION MOMENTS

Proclaiming Evidence for Truth

THIS WEEK'S CREATION MOMENT

Fossil Drives Evolutionists Batty!

I will praise [thee], O LORD, with my whole heart; I will shew forth all thy marvellous works. I will be glad and rejoice in thee: I will sing praise to thy name, O thou most High. (Psalm 9:1-2)

Have you noticed that whenever one of those interesting nature programs on television shows an especially clever design in nature, the program is always quick to explain how this came about by evolution?

One good example is the unusual hearing ability of the moth. Night-flying moths have hearing organs that are able to hear the ultrasonic signals used by bats. The bats use these signals to navigate and to find food, which includes the moths. However, evolutionists never want anyone to think about a Creator Who might have given the moths the ability to hear one of their main predators. So they quickly explained that as moths evolved, they developed the ability to hear the bats in response to bat attacks.

Several years ago, a fossilized egg from a night-flying moth was discovered. Evolutionists said that the egg was half again as old as any evidence of the first bat. Yet the egg clearly belongs to a moth species that can hear bats. The scientists said that this discovery was most puzzling because evolution would have no reason to evolve this species of moth before bats existed.

Those of us who believe the Word of our Creator in the Bible realize that all living things were made within a few days of each other. We see around us how each was designed in a way that keeps in mind the design found in other creatures. Moths have always been moths, and bats have always been bats. There's nothing puzzling about it at all.
