

# CREATION MOMENTS

*Proclaiming Evidence for Truth*

## THIS WEEK'S CREATION MOMENT

### Can There Be Design Without a Designer?

*For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made, even his eternal power and Godhead... (Romans 1:20a)*

A new science called biomimetics is making news. In the past we have talked about how some of man's designs are often similar to God's which do the same job. However, in biomimetics, researchers actively seek to study the creation to learn of designs that will

solve engineering problems.

We are all familiar with the story of how thistle seeds inspired Velcro. Engineers have used the design of the owl's wing to make the structures that carry electrical current to trains. The result is a much quieter ride. The moth's eyes' ability not to reflect light helps make it harder to be spotted by birds. The same design has now been used to make a nonreflective film. The result is a film that can be used to help prevent windows from reflecting light. This film will soon be available commercially. Many dyes are toxic, yet many creatures manage to show off bright colors without using toxic substances. Materials engineers studied how the jewel beetle produces its color. The result is a film that seems to change color depending on the angle from which you view it.

No scientist can offer a rational explanation for how so many thoughtful and efficient designs could be generated in a mindless universe. These designs are fingerprints God left all over the creation so that man might seek Him out.
