*Proclaiming Evidence for Truth*

## THIS WEEK'S CREATION MOMENT

### Ice Age or Greenhouse?

*Read Genesis 8:22*

It is interesting to look at scientific predictions made, say, a generation ago. Here is one that appeared in the December 1977 issue of *Science Digest* predicting our future climate. This article pointed out that the world's climate is already cooler than at many points in recorded history. It said that at one time Greenland was actually green and England was a

major producer of wine. The article noted that while a few scientists think the Earth is warming, most climatologists agree that Earth's climate is definitely cooling. Some even said that we may be in for a new Ice Age. The words "Ice Age" evidently caught the media's attention.

The certainty of evidence for a cooling Earth is interesting in light of the same certainty, a third of a century later, that the Earth is heating up! And notice how both predictions are working from almost the same temperature records. The article noted the reason for this early fear: the winter of 1976-77 was especially cold and snowy for much of the northern hemisphere. Then, a decade later, after a warmer summer or two, we hear about a runaway "greenhouse effect." Our best response is to remember the Lord's promise to Noah that the seasons, seedtime, and harvest will continue until the end of the world.

**Prayer:** Dear Lord Jesus Christ, I ask that You would protect me and all who are Yours from the fears which so terrify a world which neither knows nor regards Your promises. Help Your people to be lights in the midst of this darkness. Amen.
